- PCLXForm is a powerful text-processing language and command line tool that can be used for simple PCL to PDF/TIF/JPG/PNG all other formats (except PDF) conversions. The PCLXForm Command Line consists of three lines of instructions, and is easier to learn and use than a full programming language. You can access all the PCLXForm capabilities with only three instructions, select the documents to convert, choose a target PCL or text format, and select the output path for the converted files. Using PCLXForm is a snap. No experience is required to understand the PCLXForm Command Line. Option VI comes with sample programs that exercises all the functions of both the convert and viewer/printer.DLL's. Option VII is for the PCLXForm script programmers who need to write complex conversion scripts and make some automatic modifications to the converted files. Option VIII is for the PCLXForm users who need to convert to and print PDF with high-quality text extraction. Option IX is for the PCLXForm users who need to convert to and print PDF with optional text extraction. Option X is for developers who need a quick and very extensible solution for complex PCL transformation applications. Option X provides the full capabilities of our powerful PCLXForm script programming language to split, index, transform, streamedit, extract text, merge and sort PCL documents within a print stream. This option can be used for transformation of all supported formats. Option XI is for the PCLXForm users who need to convert to and print a single file in PDF with text extraction. Option XII is for the PCLXForm users who need to convert to and print a single file in PNG with text extraction. Option XIII is for the PCLXForm users who need to convert to and print a single file in JPG with text extraction. Option XIV is for the PCLXForm users who need to convert to and print a single file in TIF with text extraction. Option XV is for the PCLXForm users who need to convert to and print a single file in a high quality of TIFF with text extraction. Option XVI is for the PCLXForm users who need to convert to and print a single file in a high quality of JPG with text extraction. Option XVII is for the PCLXForm users who need to

pc12sdk provides an SDK environment for running C# programs that interpret pcl text files (pcl.exe, pc12.exe), raster and vector graphics files (pcl.exe, pc12.exe). PCL (point cloud) is a set of file formats to store 3D point clouds of varying sizes and densities. PCL stands for Point Cloud Library. It is a general purpose standard, which means that most of it is independent of any application, engine, or platform, and can be used in other applications. This includes the ability to incorporate point clouds into other image or 3D application formats like TIF, PNG, PSD, CAD, SVG, etc. pc12sdk provides support for: PCL text format (PCL) raster format (PCL) vector format (PCL) text extraction multi-layered PCL text processing PCL to bitmap (in-memory DIB, TIF, JPG and PNG) PCL to vector (in-memory GDI, EMF, PDF, EPS, PPT, RTF, etc) Multi-layered PCL to vector conversion Barcode, QR-code, Data Matrix, 2D Datamatrix, URL, barcode printing Color management Image (from PCL) to PDF Image (from PCL) to vector (in-memory GDI, EMF, PDF) Smart line trimming Line merging Text extraction Printing from the PCL application Searching for text strings Bitmap rendering Requirements: PCLTool SDK is a collection of professional tools designed to convert PCL text, raster and vector graphics files into bitmap formats (PCL to in-memory DIB, TIF, JPG and PNG) or vector formats (PCL to in-memory GDI, EMF and PDF), Intelligent Mail barcodes, 2D Datamatrix barcodes and many other new functions have also been added in this release. Popular PCL Tool SDK Options: Option I is a dynamic link library (.DLL) for applications that require custom programming and seamless integration. Option II comes with sample programs that exercises all the functions of both the convert and viewer/printer.DLL's. Option III
