abdullah noveld. Hashim Nadeem The story is about a rich billionaire who has a daughter. Abdullah Nadeem.. Hashim Nadeem.1. Field of the Invention The present invention relates to a recording method and a recording apparatus, and particularly to a recording method and a recording apparatus for recording an image on a recording medium. 2. Description of the Related Art In a thermal head of a serial printer, for example, there is a recording method of, when a recording paper is pressed against a printing surface of a thermal head, a platen roller is rotated to rotate the recording paper in a counterclockwise direction, and at the same time, a thermal head is heated for a predetermined time period so that a thermal energy caused by a local heating to the recording paper is diffused in the recording paper, whereby recording is performed. This method is generally called one-pass recording. In a thermal head of a line printer, for example, there is a recording method of, when a recording

---

paper is moved in a main scanning direction perpendicular to a printing surface of a thermal head, and a thermal head is heated for a predetermined time period in a sub-scanning direction (a direction intersecting the main scanning direction) while the recording paper is moved, whereby recording is performed. This method is called main scanning recording (line-type recording). This line-type recording allows a recorded line to have a required length in the main scanning direction, thus enabling to perform a continuous recording on a sheet in the main scanning direction. Thus, a recording speed can be increased as compared with the one-pass recording. On the other hand, in the line-type recording, there is a problem that image quality degrades since a space (a recorded line) between recorded lines is thinner than in the case of the one-pass recording. Therefore, in order to suppress the degradation of the image quality, Japanese Patent Application Laid-Open No.

---

2004-056817 proposes to perform a continuous recording while a recording paper is moved in a direction intersecting the main scanning direction and in a direction intersecting the sub-scanning direction, and a sub-scanning feed amount is adjusted based on a difference in temperatures between a portion which has already been recorded and a portion to be recorded. The above-described problem is not limited to the line-type recording. For example, in a one-pass recording of a high-speed thermal printer, a difference in a
