Pono The premier Hotel in South Korea Under a "Golden Tree" FREE LUNCH Go to best e-learning portal siteQ: Given a certain set E and a sequence a_n whose limit is in E , we have to show that E is closed. Consider the set E of all sequences $(a_n)_{n \in \mathbb{N}}$ satisfying $a_n > 0$, for all $n \in \mathbb{N}$, and $\lim_{n \rightarrow \infty} a_n = 0$. Let $a = (a_n)_{n \in \mathbb{N}}$ be a sequence in E , and let $(b_n)_{n \in \mathbb{N}}$ be a sequence of positive reals whose limit is a . We have to show that $a \in E$. I took a look at the textbook I have (guess which one it is). This exercise is just a step in the proof of a result, Theorem 1.2.7. However, the argument given in this textbook is completely different from mine. Somehow I have to prove that the real 0 is an accumulation point of E , and that $\forall \epsilon > 0 \exists n \in \mathbb{N} : d(b_n, 0) < \epsilon$, but I don't know how to tackle this. A: For a sequence in E , its limit is in E . However, 0 is not a limit of b_n , so 0 is not a limit of the sequence. Sodium balance during acute and chronic oral amiloride infusions in humans. Oral amiloride (AM) produces sodium (Na) conservation with little or no effect on potassium (K) and magnesium (Mg) balance. The present studies examined the c6a93da74d
